Coalescent theory

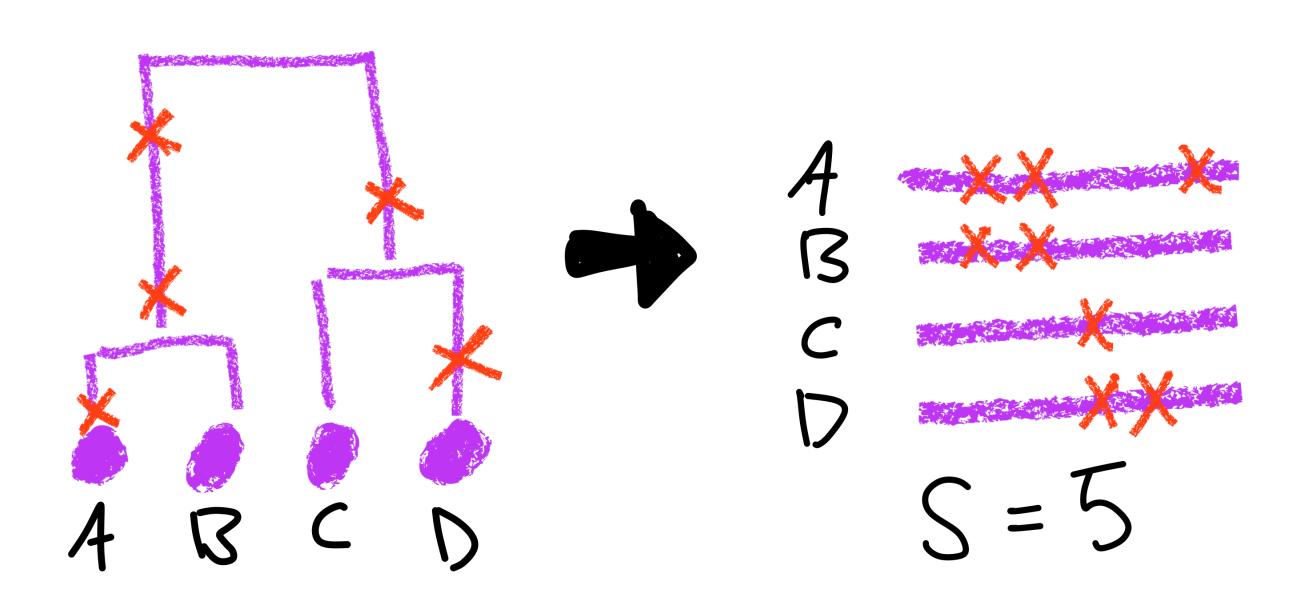

Genetic diversity

Coalescent theory

Genetic diversity

segregating sites, S, equals # motations in the sample's history (infinite sites approximation)

Constant N case:

$$|E[S] = M |E[T_{total}]|$$

$$= M \sum_{i=2}^{n} i |E[T_{i}]|$$

$$= M \sum_{i=2}^{n} i \frac{2N}{\binom{2}{2}}$$

$$= 4MN \sum_{i=1}^{n-1} \frac{1}{i}$$
